FF-OI-05: "Installing the Development Build"

Document History

Revision	Content	Editor	Time
01	Initial Document Creation	Hannes	15.06.2026

Table of Contents

1. Gain Access
2. Install Plugins
3. Compile Build
4. Start & Test

1. Gain Access

The Development Build is being stored at Github:

<https://github.com/Hannes821/Castellum>

provide your work email address.

1. Get added by the admin to the repository as collaborator;
2. Clone that build either via "download ZIP" or "clone" to your git desktop or any other fetching tool you might be familiar with.
3. Check that the entire build was downloaded correctly and "fetch" updates of main branch.

2. Install Plugins

1. You will need a few plugins which are being used:

- Journeymans Minimap Plugin
- Advanced Sessions
- Steam Advanced sessions
- Others (...)

These are packaged here:

<https://drive.google.com/drive/folders/1KQbOhYIPeG2P6dYIMpu5j6sGAplQhB8e>

(make sure you have gotten access via work email from admin)

2. Place the plugins under Epic/Unreal/5.2/Plugins (this path needs to be checked)

3. Compile Build locally

1. Install a C++ compiler, for example Visual Studio 2022.
2. Install the following librarians:
 - a. ...
 - b. ...
 - c. ... (NET 4.26...)
3. Right click on the build and press compile
4. Change the "start" to "play in editor"
5. You may now start the Build
