FF-OI-10: “Art Asset Pipeline”

Document History

Revision	Content	Editor	Time
01	Initial Document Creation	Hannes	15.06.2026

Table of Contents

1. Planning the asset

Game Design /Writing will provide and discuss a story and mechanical idea (multi-level hook) that shows feasibility and convinces the steering board.

Then the Admin/project manager creates a card with it on Trello.
Details of Implementation Ideas and Principles are nailed down.
Then, a Concept Art claim is handed out.

Keep in mind: rather 1 good asset than 10 mediocre ones, same as for mechanics.

2. Concept Art

Concept Art has to be convincing and cover certain listed requirements, such as:

- historicity,
- overall consistency with design language /visuals
- keep in mind performance restrictions for any reasons
- keep in mind unique aspects and what else is already in the portfolio for the game

Then, once approved, its handed over to 3D Art.

3. 3D-Art

3D-Art takes it and models the asset.

- Base model,
- high poly,
- sculpt,
- retopology, (optimization!)
- baking,
- UVs,
- textures,
- implementation in Engine

- Animation

4. Implementation

Imps /Coders bring the asset alive, be it as decorative clutter or as rigged prop or character.

5. Quality Assurance

Based on tester's feedback, it might be overhauled.
