02	Formal update	Arina	25.05.2026

Table of Contents

1. Instructions for the submenu buildings

Purpose of this document

Targets:

- Explain building submenu architecture and data flow
 - Explain page manager architecture
 - Clarify how UI pages, tags, and spawn classes connect
-

1 Instructions for the submenu buildings

Path:

E:/UnrealProjects/Feldfeste/Castellum/Content/CA_Code/Blueprints/Widgets/Master Widget/Menu/BP_Submenu_Buildings.uasset

In the hierarchy, you will see the **page manager**. Select it.

It's used for working with buttons in the menu.

Limitation: a maximum of 10 buttons per submenu. To increase it, you'd need to go to Arina and ask her to modify the code.

It contains **MenuPage**, which has the buttons for building CATEGORIES. These buttons and their images are configured in DT_Objects_Info.

It also contains **Pages** — these are the actual pages, matched by index

A page consists of tags of all buildings in the category (maximum 10)

Pages		10 Array elements	+	🗑
▼ Index [0]		2 members	▼	
	Name	Communal	🚩	
▼ ObjButtonTag		10 Array elements	+	🗑
	Index [0]	Edit ▼	Building.Communal.House	▼
	Index [1]	Edit ▼	Building.Communal.Granary	▼
	Index [2]	Edit ▼	Building.Communal.Tavern	▼
	Index [3]	Edit ▼	Building.Communal.Marketplace	▼
	Index [4]	Edit ▼	Building.Communal.TradingCourt	▼
	Index [5]	Edit ▼	Building.Communal.Guildhall	▼
	Index [6]	Edit ▼	Building.Communal.Palas	▼
	Index [7]	Edit ▼	Building.Communal.StatueCivil	▼
	Index [8]	Edit ▼	Building.Communal.GallowTower	▼
	Index [9]	Edit ▼	Building.Communal.Pillory	▼

To make **building spawn work**, you need to configure the data in **DT_Objects_info** (/Content/CA_Code/Blueprints/Wiki/DT_Objects_info.uasset)
Specifically for spawning, a Class reference needs to be specified. If it's not specified, the code won't know what to spawn, won't know the price, and so on

If the class is invalid, hovering over the icon will print a message to the log

Example:

Granary isn't working.

1. Go to the Granary blueprint, open Class Defaults, and check the IndividualTag – Building.Category.Communal.Granary.

2. Go to BP_Submenu_Buildings and check if the tag is correctly set in the Page Manager

3. Go to DT_Objects_Info and check – oops, class missing

Grana						
Row Name	IndividualTag	All Name	Description	ClassReference	Icon	
Building.Communal	{ "TagName": "Building.Category.Communal" }	{ " Communal Buildings	Social buildings f	None	/Game/CA_UI/IconsAndBackgrounds	
0 Building.Communal.Granary	{ "TagName": "Building.Communal.Granary" }	{ " Granary	This building stor	None	/Game/CA_UI/IconsAndBackgrounds	

If a placeholder icon (red devil) shows up in the menu, the tag has no icon assigned
